## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7 and 18-19, drawn to a method of measuring interphase liquids.

Group II, claim(s) 8-11 and 18-19, drawn to a device for measuring interphase levels between fluids.

Group III, claim(s) 12-15, drawn to a method for measuring concentrations/parts of multiphase liquids.

Group IV, claim(s) 16 and 17, drawn to a device for measuring concentrations/parts of a first fluid in a second fluid.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

- the method of Group I may be used for registering impedance or resonance frequency and measuring fluid layers at various height levels while the device of Group II registers impedance and resonance frequency and does not have to measure various height levels or fluid layers.

- In this case the device of Group IV is used to measure properties between two different fluids while the device of method of Group III is used for a multiphase fluid, which would indicate on fluid with more than one phase.
- Group III measures concentrations/parts of a conductive fraction in flowing multiphase mixtures, while the method of Group I relates to measuring interphase levels between fluids. These are measuring two different things.
- The method of Group I is for measuring interphase liquids while Group IV is a device for measuring concentrations/parts of a first and a second liquid, which would indicate multiple liquids while an interphase liquid would indicate a single liquid.
- Group II measures levels while Group III measures concentrations/parts.
- The device of Group II is for measuring interphase liquids while Group IV is a device for measuring concentrations/parts of a first and a second liquid, which would indicate multiple liquids while an interphase liquid would indicate a single liquid.
